

## Enabling. Transformation.

- ▶ TopVue provides solutions that support transformational objectives of modern warfighting efforts. Our integrated business environments and off-the-shelf tools enable common processes and interoperability, in order to attain desired cost efficiency.

## Common Process Support

- ▶ TopVue targets solutions for common processes that can be reused across organizations. Enabling these common processes reduces non-value added redundancies in support of program and center-wide mission objectives.

"The ideal standardized database...TopVue understands the Governments needs."

## Interoperability

- ▶ TopVue architecture is based on best-in-class web technology, including XML, .NET, Java, and Oracle. This architecture enables plug and play integration and interoperability of data between TopVue and other systems. This maximizes cross-program and cross-agency use, as well as enterprise integration.

## Cost Efficiency

- ▶ TopVue's support of common program processes on an interoperable platform helps reduce overall program costs. Use of TopVue solutions is attributed to millions of dollars of cost avoidance for our customers. Low acquisition costs along with low optional recurring expenses optimize budgets and protect IT investments.

## DoD Market Focus

Acquisition. Sustainment.

TopVue's solutions are implemented on major weapon system acquisition and sustainment programs in the Army, Navy, and Air Force. The mission critical domains in which TopVue is used include:

- ▶ Space & C4I
- ▶ Nuclear Missiles and Missile Defense
- ▶ Aging Weapon Systems
- ▶ Anti- Terrorism Installation Protection

## Ready to Implement

The TopVue solution sets are offered off-the-shelf and include the following:

- ▶ RAGEvue: Integrated Business Environments
- ▶ BSCvue: Organizational Balanced Scorecards
- ▶ CDRLvue: Contract and CDRL Management
- ▶ RiskVue: Enterprise Risk Management
- ▶ CMvue: Configuration Management and OSS&E Compliance
- ▶ ILSvue: Integrated Logistics Data Management
- ▶ PMvue: Long Range Sustainment Planning
- ▶ ShieldVue: Installation Protection CM and ILS
- ▶ DepotVue: Depot Planning and Mod. Costing
- ▶ EVMvue: Earned Value Monitoring
- ▶ FMSvue: Foreign Military Sales Contract Management

## Versatile. Extensible. Reusable.

TopVue provides an integrated business environment platform to assist IT groups in extending the use of TopVue for custom purposes without tedious programming.

- ▶ Extend the Oracle® data model
- ▶ Customize the GUI
- ▶ Manage workflow
- ▶ Integrate with email
- ▶ XML import/export of data
- ▶ Web services for integration

## TopVue Customer Results

- ▶ 25% Savings on CDRL data review administration
- ▶ 40% Annual reduction in administration of meetings and other review processes

## TopVue Customer Quotes

TopVue customers include the GPS JPO, ICBM SPO, Space & C3I SPO, Project Guardian, A-10, F-16, US Navy SATCOM, AMF JTRS, GBS, Nuclear Command, Control, Communications SPO, and others.

"TopVue brings together long-range planning, risks, project execution, and weapon system engineering data off-the-shelf like no one else."

"The best CDRL tracking system out there in terms of cost, features, and value."

"I have not seen such an integrated approach for Program visibility and Contract Data management and CM in a decade."

TopVue solutions can be implemented as a whole, or incrementally assembled to meet your project goals. Call TopVue for details:  
(801) 825-7100

TopVue Defense, Inc. provides off-the-shelf, web-based applications that transform how government organizations acquire and sustain systems. TopVue solutions target CDRL & contract management, integrated risk management, joint-program collaboration, configuration management and OSS&E requirements, logistics data management, depot planning, and foreign military sales support. TopVue offers an application-generation architecture that supports the evolution of tailored “integrated business environments.”

A significant benefit of integrated business environments, or joint-service collaboration and interoperability, lies in program cost reduction. As program processes are streamlined and systems transformed into interoperable environments, non-value added processes are eliminated, core processes made more efficient, and substantial cost savings are realized.
